ACKNOWLEDGEMENT

I would like to express my sincere gratitude to all those who have supported and guided me during my On-the-Job Training program.

First and foremost, I am thankful to my college, R. N. G. Patel Institute of Technology and Information Technology (IT) department for providing me with the opportunity to undergo this training as a part of the B.Voc Software Development curriculum.

I express my gratitude to Dr. Latesh B. Chaudhari, Director, RONGPIT, and V.C. Joshi, Head, IT Department, B.Voc. Software Development as well as Ms. Monali Gandhi, Coordinator, OJT, IT Department and to all the faculty members for their constant encouragement, co-operation and support.

I extend my heartfelt thanks to [UNISTAR SOFTECH PRIVATE LIMITED] for allowing me to undertake my training in their esteemed organization. I am deeply obliged to my industry mentor, [Mentor's Name/Designation], and the entire team for their constant support, patience, and for sharing their knowledge and expertise, which helped me gain practical insights into software development.

Finally, I would also like to acknowledge the support of my friends and family, who encouraged me throughout this journey. This training has been a great learning experience, and it has enhanced my technical skills, professional understanding, and confidence.

Sincerely,

Rajodiya Trushangi(Enroll:240841102052)

ABSTRACT

The Car Booking System is a web-based application developed using the Laravel framework to simplify the process of online vehicle booking and management. The main objective of this project is to provide customers with an easy and efficient platform to view available cars, check details, and book vehicles online. The system includes user registration, login, car listing, booking management, and contact features, along with an admin panel for managing cars, customers, and booking records. The application is developed using HTML, CSS, JavaScript, PHP, MySQL, and Laravel, following the MVC architecture for better organization and security. This system reduces manual work, improves accuracy in maintaining records, and enhances customer convenience through online accessibility. The project also demonstrates practical knowledge of database management, authentication, responsive web design, and full-stack web development concepts. This project was carried out during the On Job Training (OJT) in association with [UNISTAR SOFTECH](#) and helped in gaining professional experience in modern web application development.

What is Laravel?

Laravel is a modern, open-source PHP web application framework designed to make building robust, scalable, and elegant web applications faster and easier. It provides built-in tools for routing, authentication, database management, and more, making it one of the most popular frameworks among developers worldwide.

• **Laravel Features**

Laravel is an open-source web framework written in PHP that follows the model–view–controller (MVC) architectural pattern. It is intended for the development of web applications following the principles of model–view–controller (MVC) architecture. Laravel is free and open-source and released under the terms of the MIT License.

- **Template Engine**: Laravel includes a templating system called Blade. The blade allows you to write plain PHP code in your views, but it also provides convenient shortcuts for common tasks such as displaying data, creating forms, and paginating records.
- **Routing**: Laravel provides an easy and intuitive way to define routes in your application. Routing allows you to map URLs to specific actions, such as displaying a view, making an API call, or sending an email.
- **Eloquent ORM**: Eloquent is Laravel's built-in Object Relational Mapper (ORM). It provides an easy way to define relationships between models and allows you to perform database operations in an object-oriented manner.
- **Security**: Laravel includes several security features such as input validation, password hashing, and user authentication.
- **Artisan**: Artisan is a command line interface that comes bundled with Laravel. It allows you to perform common tasks such as database migrations, database seeding, and package installation.
- **Testing**: Laravel includes a built-in testing framework that allows you to easily test your application. It also provides convenient methods for mocking and stubbing external services.

- **Database Migrations:** Database migrations enable developers to easily modify the structure of their database without having to write SQL queries.
- **Event Handling:** Laravel offers an event-driven architecture that allows developers to easily define events and handle them.

- **Key Features of Laravel**

- **Language Support:** PHP Version $\geq 5.5.9$
- **MVC Framework:** Yes, from Laravel 2 onwards.
- **Testing:** Unit testing with PHPUnit is built-in to prevent regressions.
- **Database Migration:** Simplifies the deployment and updating of applications.
- **Security:** Uses SSH (Secure Shell) for executing CLI commands securely.
- **Caching:** Built-in caching support to optimize performance.
- **Form Validation:** Robust form validation methods are integrated.
- **Scaffolding:** Allows specification of application database usage.
- **Mobility:** No direct support for mobile app development.

- **Reasons to Learn Laravel**

- **Robust Framework:** Features like Eloquent ORM and Blade templating simplify complex web development tasks.
- **Active Community:** Access extensive documentation, tutorials, and community support.
- **Scalability:** Modular structure and built-in tools support scalable application development.
- **Job Opportunities:** High demand for Laravel skills in the industry.
- **Future-Proofing Skills:** Equip yourself with the ability to build modern, high-performance web applications.

What is a Resource in Laravel?

In Laravel, a Resource is a way to transform your models and data into JSON responses or API-friendly output.

It is commonly used when building APIs to format data consistently without exposing unnecessary details from your database.

- Example: You have a Car model with 10 fields, but you only want to send id, name, and rent in the API response.
- Laravel Resource allows this selective formatting easily.

Model in Laravel

A Model represents the data structure and business logic of your application. It interacts with the database using Eloquent ORM.

- Each model usually corresponds to a database table.
- Handles CRUD operations:
 - create(), read/find(), update(), delete().
- Defines **relationships**:
 - hasOne, hasMany, belongsTo, belongsToMany.

Controller in Laravel

A Controller handles HTTP requests and returns responses (views, JSON, redirects). It acts as the middle layer between the Model and the View.

- Manages routes and business logic.
- Can return:
 - Blade views
 - JSON (for APIs)
 - Redirects
- Can use resource controllers for CRUD.

Middleware in Laravel

Middleware acts as a filter between the request and the controller. It can allow or block requests based on conditions.

- Used for authentication, logging, role-based access, CORS, etc.
- Can be global (applies to all routes) or route-specific.
- Created using `php artisan make:middleware MiddlewareName`.

- **Laravel Installation**

System Requirements

Before installing Laravel,

- PHP $\geq$ 8.1
- Web server (Apache/Nginx)
- MySQL database
- Composer installed

Step 1: Install XAMPP

1. Download XAMPP
2. Install it
3. Start:
 - Apache
 - MySQL

Step 2: Install Composer

1. Download Composer
2. Install it

<https://getcomposer.org/>

3. Verify installation:
4. Command = composer -V

Step 3: Install Laravel Project

Type this in cmd:

composer create-project laravel/laravel project-name

Step 4: Open Project Folder

cd myapp

Step 5: Create Database

Open **phpMyAdmin**

Create a new database (same name as .env)

Step 7: Run Migration To Create Database

php artisan migrate

Step 8: Run Laravel Server

php artisan serve

Open browser:

<http://127.0.0.1:8000>

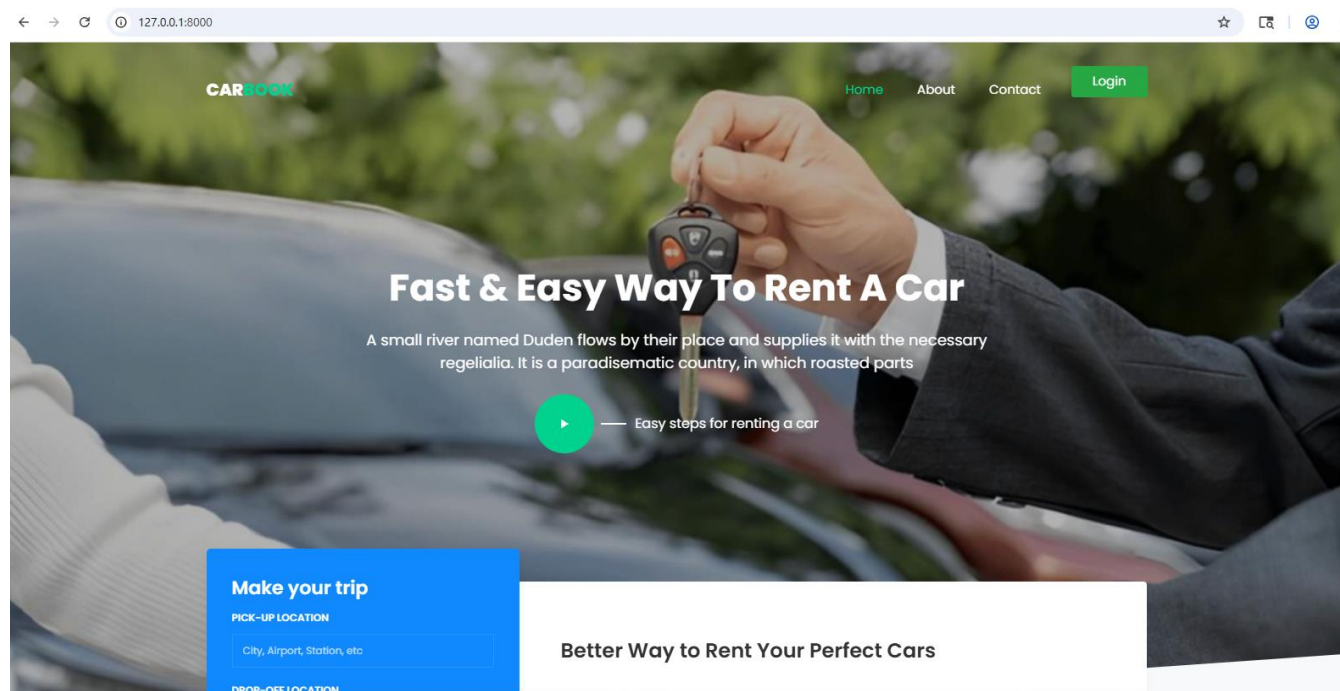

CarBooking - Laravel Project Documentation

1. Project Title: CarBooking

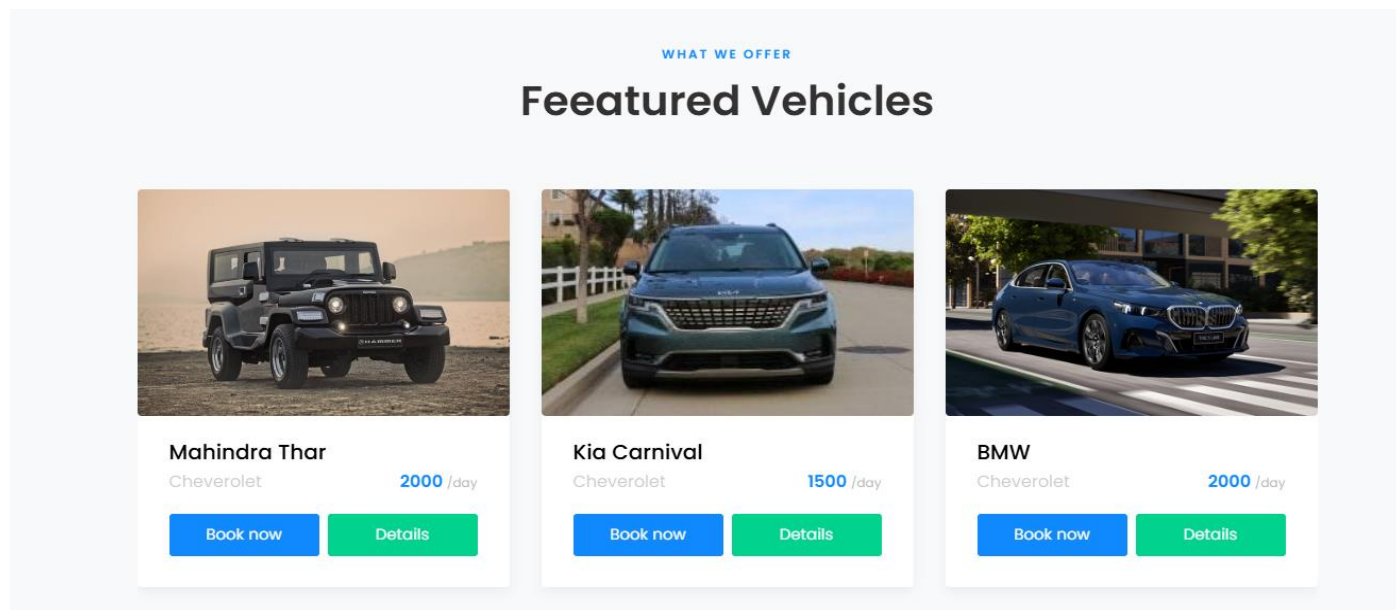

2.Run Server In CMD : php artisan serve

<http://127.0.0.1:8000/>
